

FOR IMMEDIATE RELEASE

**PRIME CARRIER STRENGTHENS MARKET OFFERING WITH NEW
RELEASE OF THE CONCEPT-TEL PRODUCT**

Concept-Tel 6.0 adds support for US Domestic traffic, improves usability and reporting

New York, NY — October 6th, 2008 — Prime Carrier, the market leader in the provision of ‘On Demand’ solutions for the global telecommunication industry, today announced a new release of the Concept-Tel application suite it acquired from F-Line Technologies just a month ago.

Concept-Tel provides end-to-end management of all facets of a Wholesale Carrier’s business from importing latest codes/rates, processing call data, cost, quality and margin reporting through to Carrier billing.

Concept-Tel has proven to deliver increased profitability through detailed margin analysis, least cost routing and advanced accounts management minimizing invoice disputes. The latest release of Concept-Tel builds new features and functionality into the most powerful end-to-end call management and analysis platforms available in the market today. Included in this new release is US Domestic support, On Demand delivery and a number of important usability enhancements.

This major release further strengthens Prime Carrier’s capabilities to support US-based Carriers and those with significant US traffic. This is both from the functionality required to support the larger number of codes required but also the volume of US Domestic traffic handled.

In this release all US calls are identified and processed separately from International traffic, to give the visibility and detailed analysis required. The US traffic is mapped against a predefined code table, maintained within Concept-Tel to provide the deeper precision in rating & billing by LATA, rate center and nxxx level detail.

As with all Prime Carrier solutions, Concept-Tel 6.0 is now able to be delivered 'On Demand' hosted in a secure managed 24*7 operation with zero operational impact to the customer.

Concept-Tel 6.0 also delivers further usability enhancements, building on Concept-Tel's existing strong user experience, with individualized language support, increased number of Export formats, Microsoft Vista support, an improved graphing engine, one-step imports and automated billing.

"This release underpins serious growth and expansion for Prime Carrier, with localized specialization for the requirements of processing US Domestic traffic, to give our customers the level of precision in the rating, billing, analysis and reporting they require. Prime Carrier US, based in New York, greatly improves our delivery and support capabilities in the complete Americas region. With further consolidated operational capabilities and 'Go-to-Market' synergies, I am very excited about the strengths that Prime Carrier now offers as a global organization and the opportunity to expand the current customer base." stated Brett Rosenblatt, President, Prime Carrier US.
